

How to Mine VKAX

It's easy and fun to get started mining VKAX!

Mining crypto currencies can be an easy way to put your idle technology to work by earning part of the VKAX block rewards. Using a home computer or even a laptop, anyone can begin mining!

STEP 1

[Download the VKAX Windows wallet](#), unzip the folder and run the vkax-qt executable file. This will open the graphic “QT” wallet and begin the synchronization process. (The first time can take a while)

You should make an encryption passphrase and backup the wallet.

Navigate to the “Receive” tab and click the “Create new receiving address” button. This is how you generate a new address, which can be used to receive the VKAX crypto currency. Next, you will need the software which will be used to mine VKAX with your computer’s processor.

STEP 2

[Download the Open Source XmrighCC Windows mining software](#). If your browser warns about dangerous files, don't worry! This is a false positive. Windows can block crypto currency related files by default to protect from strangers mining on your computer without your knowledge. The miners’ code is open source and is not dangerous. Mining will not harm your computer.

After downloading and extracting the XmrighCC VKAX miner—locate the “mine_VKAX” batch file. You will need to right click, edit the file and paste your VKAX receiving address that you generated earlier. Save the file and then double click it, to run it.

If everything worked, the miner should pop up and show you a display. To check the status of your rigs and payments, [you can visit the pools wallet page](#). Congrats! You are now mining!
